Excellence

Medpro by Anax Associates (Pvt) Ltd

Establishing modern enterprises that adhere to the highest international quality standards in the production of medical devices and healthcare solutions, meeting the needs of customers, through a continually evolving Quality
Management System (QMS)

Excellence through collaboration and innvoation values

The customer is at the heart of our business, and we consistently aim to understand and satisfy their current needs while anticipating and addressing future demands. Streamlined business processes enable us to deliver top-quality products to our clients. Our employees are our most valuable asset. Management is committed to creating an environment where every team member can showcase their talents and unlock their creativity to reach shared goals. The company ensures that employees are well- qualified and encourages continuous learning and self-improvement to further develop their skills. Our partners are key to achieving our goals, and we build relationships based on long-term, mutually beneficial cooperation. We constantly refine our products and processes by gathering customer feedback reviewing internal audits, and staying updated on new technologies in production and management.

About Anax Associates (Pvt) Ltd (Pakistan)

Anax Associates (Pvt) Ltd is Pakistan's largest manufacturer of disposable surgical drapes. Through our Medpro brand, we deliver high-quality products designed to meet the specific needs of healthcare professionals. Medpro was the first to introduce the "Your Pack Concept" (YPC) in Pakistan, offering customized solutions. We prioritize quality, ensuring that every pack is sterilized at our own ETO facility before it reaches the market. Additionally, we provide sterilization packaging under the Steri Medpro brand, specializing in CSSD solutions.

Prevention of post-surgery complications

Improving quality of life

Quality of life with an extended survival intent

Widespread medical devices

MATERIALS

Anax Associates (Pvt) Ltd. produces a variety of products using advanced non-woven materials and the latest technologies, aimed at reducing hospital- acquired infections and postoperative complications.

Nonwovens

- Breathable, comparable to cotton or linen.
- Absorbs and retains moisture due to its unique fiber structure.
- Hypoallergenic, as no chemicals are used in production.
- Multi-layered design allows for customizable features like water repellency and antibacterial properties. Soft and comfortable to the skin.
- Flexible, offering freedom of movement.

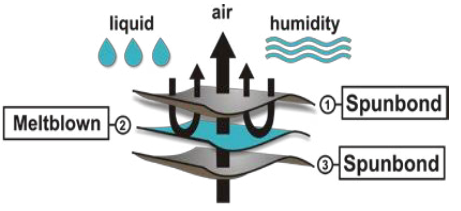

Spunbond: A lightweight fabric made from thermally bonded polypropylene fibers. Its key qualities include surface density, hydrophilicity or hydrophobicity, antistatic properties, UV resistance, strength, tear resistance, breathability, and softness, making it gentle on the skin.

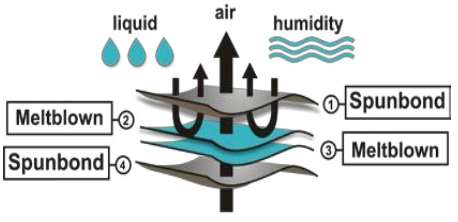

Meltblown: A nonwoven fabric made from polypropylene microfibers (1-5 microns thick) through a blowing process. This material provides superior uniformity, water permeability, breathability, and high filtration properties. It excels in filtering, absorbing, and isolating microorganisms and fungi, making it ideal for surgical masks, respirators, vacuum cleaner filters, and industrial applications.

Products manufactured using various types of nonwoven fabric

SMS Fabric density 40 g/m²

Standard - Three-layer nonwoven fabric SMS (spunbond-meltblown-spunbond) It has the required thickness and density of material and properties necessary for medical devices - air permeability, strength, biological inertness. Spunbond plays a reinforcing role, intermediate layer of meltblown material has high barrier properties, in addition, it does not absorb moisture and prevents penetration of various bacteria.

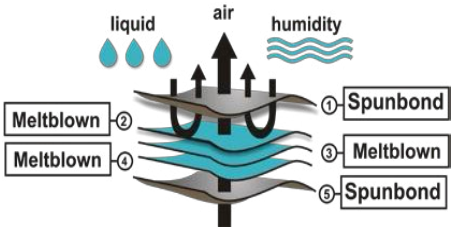

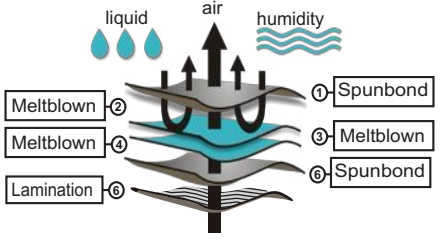

SMMS Fabric 40 g/m² -70 g/m2

Comfortable Four-layer non-woven fabric (spunbond-meltblown-meltblown- spunbond). Spunbond plays a reinforcing role, the double intermediate layer of meltblown material has high barrier properties, in addition, it does not absorb moisture and prevents penetration of various bacteria.

Medpro Series

Materials of Medpro (SMMMS, Spunlace, Sunteys, Fibrella, Medicase, Softes, Wooldelpulp, etc.) Innovative materials provide a high level of protection and comfort without hindering freedom of movement. It has excellent barrier properties and guarantees a high level of protection. Quickly removes heat from body, keeping cool and comfortable. Exceeds requirements of the European standard EN 13795 for water permeability, lint release, tear and burst resistance.

Laminated nonwovens

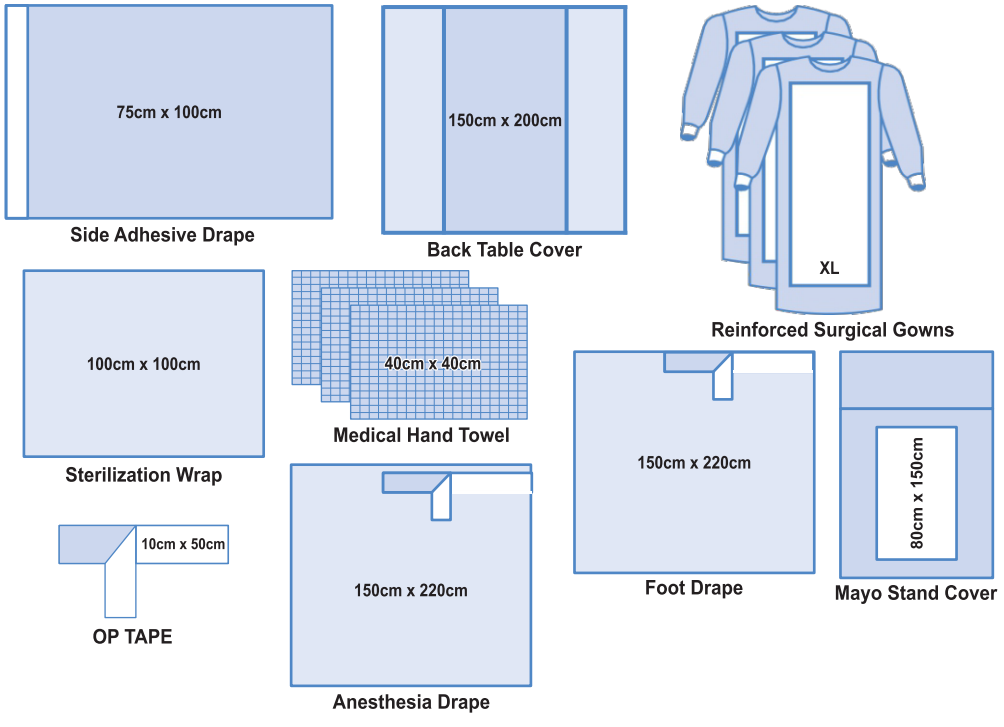

Laminated nonwovens (Laminated Spunbond, Laminated Spunlace, etc.) are most often two-or three-layer. Spunlace, spunbond, paper, etc. are used as a base. A thin layer of molten polymer (polyethylene or polypropylene) is applied to them using special equipment.

MedPro General Surgery Drape

Ref# 7003

- Medpro disposable general surgery drape pack offers a standard sterile solution for covering patients and equipment during surgery.
- Medpro use 70 gsm fabric, it ensures superior quality and safety.
- Medpro drapes are sterilized and manufactured to meet international standards (EN ISO 13485), providing enhanced protection for both patients and healthcare professionals. Each pack includes three reinforced surgical gowns.
- Medpro also offers customized solutions through “Your Pack Concept” (YPC).

Disposable Surgical Gown & Face Mask

MedPro™

MedPro disposable surgical gowns are preferred in healthcare settings because they offer superior protection against pathogens, helping to reduce Hospital-Acquired Infections (HAIs). Unlike reusable linen, which can lose its protective barrier after washing, disposable surgical gowns are designed to remain effective for a single use.

MedPro™

Steri Med-Pro
Sterilization Packaging

The heat-sealable sterilization packaging products are based on a paper and plastic film construction, equipped with a 3-line sealing for extra stability. Steri-Medpro products are available in flat and gusseted reels and flat pouches. They provide a microbial barrier after sterilization unless package is opened or damaged. Easy to use with clean and fibrefree opening.

Gusseted Reels

Reels: A continuous pouch which is cut to the desired length and sealed at either end.
